

Norwich Cathedral Close (Studies in the History of Medieval Religion)

Winner of a CHOICE Outstanding Academic Title Award What explains the layout of the cathedral and its close? What ideas and beliefs shaped this familiar landscape? Through this pioneering study of the development of the close of Norwich cathedral - one of the most important buildings in medieval England - from its foundation in 1096 up to c.1700, the author looks at changes in cathedral landscape, both sacred and social. Using evidence from history, archaeology and other disciplines, Professor Gilchrist reconstructs both the landscape and buildings of the close, and the transformations in their use and meaning over time. Much emphasis is placed on the layout and the ways in which buildings and spaces were used and perceived by different groups. Patterns observed at Norwich are then placed in the context of other cathedral priories, allowing a broader picture to emerge of the development of the English cathedral landscape over six centuries.
