

Concurrent Programming in Mac OS X and iOS: Unleash Multicore Performance with Grand Central Dispatch

Now that multicore processors are coming to mobile devices, wouldn't it be great to take advantage of all those cores without having to manage threads? This concise book shows you how to use Apple's Grand Central Dispatch (GCD) to simplify programming on multicore iOS devices and Mac OS X. Managing your applications resources on more than one core isn't easy, but it's vital. Apps that use only one core in a multicore environment will slow to a crawl. If you know how to program with Cocoa or Cocoa Touch, this guide will get you started with GCD right away, with many examples to help you write high-performing multithreaded apps. Package your code as block objects and invoke them with GCD. Understand dispatch queues, the pools of threads managed by GCD. Use different methods for executing UI and non-UI tasks. Create a group of tasks that GCD can run all at once. Instruct GCD to execute tasks only once or after a delay. Discover how to construct your own dispatch queues.

Concurrent Programming In Mac Os X And Ios Unleash Multicore Concurrent Programming in Mac OS X and iOS: Unleash Multicore Performance with Grand Central Dispatch eBook: Vandad Nahavandipoor: : **Concurrent Programming In Mac Os X And Ios Unleash Multicore** Concurrent Programming In Mac Os X And Ios Unleash Multicore Performance With Multicore Performance With Grand Central Dispatch is available on print. **Concurrent Programming in Mac OS X and iOS: Unleash Multicore** Jul 2, 2016 Concurrent Programming in Mac OS X and iOS: Unleash Multicore Performance with Grand Central Dispatch.
