

Atmospheric Corrosion (The ECS Series of Texts and Monographs)

Presents a comprehensive look at atmospheric corrosion, combining expertise in corrosion science and atmospheric chemistry. Is an invaluable resource for corrosion scientists, corrosion engineers, and anyone interested in the theory and application of Atmospheric Corrosion. Updates and expands topics covered to include, international exposure programs and the environmental effects of atmospheric corrosion. Covers basic principles and theory of atmospheric corrosion chemistry as well as corrosion mechanisms in controlled and uncontrolled environments. Details degradation of materials in architectural and structural applications, electronic devices, and cultural artifacts. Includes appendices with data on specific materials, experimental techniques, atmospheric species.
