

Applied Algebra, Algebraic Algorithms and Error-Correcting Codes: 14th International Symposium, AAECC-14, Melbourne, Australia, November 26-30, 2001. Proceedings (Lecture Notes in Computer Science)

The AAECC Symposia Series was started in 1983 by Alain Poli (Toulouse), who, together with R. Desq, D. Lazard, and P. Camion, organized the first conference. Originally the acronym AAECC meant Applied Algebra and Error-Correcting Codes. Over the years its meaning has shifted to Applied Algebra, Algebraic Algorithms, and Error-Correcting Codes, reflecting the growing importance of complexity in both decoding algorithms and computational algebra. AAECC aims to encourage cross-fertilization between algebraic methods and their applications in computing and communications. The algebraic orientation is towards finite fields, complexity, polynomials, and graphs. The applications orientation is towards both theoretical and practical error-correction coding, and, since AAECC 13 (Hawaii, 1999), towards cryptography. AAECC was the first symposium with papers connecting Gröbner bases with E-C codes. The balance between theoretical and practical is intended to shift regularly; at AAECC-14 the focus was on the theoretical side. The main subjects covered were: Codes: iterative decoding, decoding methods, block codes, code construction. Codes and algebra: algebraic curves, Gröbner bases, and AG codes. Algebra: rings and fields, polynomials. Codes and combinatorics: graphs and matrices, designs, arithmetic. Cryptography. Computational algebra: algebraic algorithms. Sequences for communications.
