

# Environmental Art 2013 Wall Calendar: Contemporary Art in the Natural World

As one of the most exciting art movements of our time, environmental art celebrates our connection to the natural world through beauty, science, metaphor and ecological restoration. It encompasses a surprising landscape of approaches, from ephemeral art in nature sculptures designed to last only a few hours before returning to the earth, to community-based eco-art installations which clean up polluted watersheds and promote public understanding of local and global environmental issues. The projects featured in the Environmental Art wall calendar provide a sampling of some of the latest developments in this field to stimulate the imagination and promote the role of art in the creation of a more sustainable world culture.
