

# GeoSensor Networks: Third International Conference, GSN 2009, Oxford, UK, July 13-14, 2009, Proceedings (Lecture Notes in Computer Science / ... Applications, incl. Internet/Web, and HCI)

This volume serves as the conference proceedings for the Third International Conference on GeoSensor Networks (GSN 2009) that was held in Oxford, UK, in July 2009. The conference addressed issues related to the deployment of

geosensor networks and the collection and management of real-time geospatial data. This volume includes papers covering a variety of topics, ranging from sensing, routing and in-network processing, to data modelling, analysis, and applications. It reflects the cross-disciplinary nature of geosensor networks by bringing together ideas from different fields, such as geographic information systems, distributed systems, wireless networks, distributed databases, and data mining. The papers included in this volume push the frontiers of GSN research in several new directions. First, they shift the traditional paradigm of fixed resource-constrained sensor networks to more versatile scenarios involving mobile sensors with varying levels of computation, sensing, and communication capabilities. Second, emerging applications, such as urban sensing, are raising interesting new GSN challenges, such as participatory sensing, as well as the need to standardize protocols and interfaces, and integrate multiple sensor networks. Finally, technological advances in geosensor networks have enabled the collection of vast amounts of real-time high-resolution spatio-temporal data; the sheer volume of these data raises the need for efficient data modelling, analysis, and pattern extraction techniques.
