

## Installing Apache, PHP and MySQL in Ubuntu 12.10

My goal with this small publication is to allow new Ubuntu 12.10 users like me be able to accomplish the ability to have and love this operating system. As a web developer, all my work depends on a computer and software. Open Source technology allows me to have a system with the latest technology when lifes struggles does not entitle me to be able to manage and update the most expensive tools I need. In this publication you will be able to have everything you need to prepare a Open Source based system with all the applications required for a professional Web & Graphic Development Environment.
