

National Green Building Standard 2012 (International Code Council Series)

The future of building design is green construction. In fact, the shift toward incorporating green practices into everyday construction is already underway. As a result, there is no better way to prepare for the future than with the NATIONAL GREEN BUILDING STANDARD (ICC 700-2012) the result of a joint effort between the International Code Council (ICC) and National Association of Home Builders (NAHB). The standard outlines effective, relevant green practices, including lot design; preparation and development; resource, energy, and water efficiency; indoor environmental quality; and operation, maintenance, and building owner education. Its goal is to give you the means to achieve your sustainability goals, whether they are designing a basic, entry-level green building or aiming for the highest level sustainable green building with energy savings of 65 percent or higher. It accomplishes this by defining four threshold levels: Bronze, Silver, Gold, and Emerald. The end result is a valuable tool that will help you put green methodology into practice in a variety of areas, from new homes to high-rise multifamily buildings, and from remodels and additions to hotels and motels. Also available - DEWALT Mobile Pro, a free app that features a construction calculator with integrated reference materials and access to hundreds of additional calculations as add-ons.
