

Computer Performance Engineering: 6th European Performance Engineering Workshop, EPEW 2009 London, UK, July 9-10, 2009 Proceedings (Lecture Notes in Computer Science)

This volume of LNCS contains the proceedings of the 6th European Performance Engineering Workshop, held at Imperial College London during July 9-10, 2009.

This was the first in the EPEW series to be held in the UK, following on from the highly

successful workshops that were held in Toledo (2004), Versailles (2005), Budapest (2006), Berlin (2007) and Palma de Mallorca (2008). As with previous EPEW workshops, the event was supported by submissions from all over the

world, including Asia, the Middle East, North America, as well as Europe. There were 33 submissions in total of which 13 were selected for full papers and four as short papers. I would like to commend the diligent efforts of

the Programme Committee, who returned a complete set of reviews - four per paper - which is most unusual. This enabled and enhanced the week-long programme discussion which selected the papers presented here. The papers

themselves maintained the tradition of diversity and quality that the European Performance Engineering Workshop has supported throughout. Papers representing the different fields of performance engineering and analysis, were

broadly classified by applications, techniques and formalisms. In the applications domain, we had a significant contribution, I believe for the first time, in the modelling of auctions and markets. There were also contributions

on hardware modelling of RAID systems, as well as five papers on performance aspects of cellular and fixed-line networks. New techniques presented included a novel approach to mean value analysis, an application of stochastic ordering to queueing networks and an interesting extension of passage-time analysis.
