

Real World Java EE Night Hacks--Dissecting the Business Tier

The surprisingly successful book *Real World Java EE Patterns Rethinking Best Practices* [press.adam-bien.com] discusses the rethinking of legacy J2EE patterns. Now, *Real World Java EE Night Hacks* walks you through the Java EE 6 best practices and patterns used to create a real world application called x-ray. X-ray is a high-performance blog statistics application built with nothing but vanilla Java EE 6 leveraging the synergies between the JAX-RS, EJB 3.1, JPA 2, and CDI 1.0 APIs. Foreword by James Gosling, Father of JavaTopics covered include:

- A brief introduction into the core principles of Java EE 6 (EJB 3.1, CDI, JPA, JTA, Dependency Injection, Convention over Configuration, interceptors, transactions, REST)
- Using real world code
- Unit and integration testing of Java EE 6 applications using JUnit and ScalaTest
- Using interceptors for performance measuring and monitoring
- Creating mocks with Mockito for EJB 3.1, CDI, JPA, and JAX-RS
- Developing embedded integration tests with Arquillian
- Productive use of JAX-RS, Contexts and Dependency Injection, EJB 3.1, and JPA
- RESTful services and REST clients with Java EE 6
- Convention over Configuration with Java EE 6
- Effective component configuration with CDI and Convention over Configuration
- Plug-in implementation with CDI
- Transactional pub/sub without JMS based on CDI and EJB 3.1
- Continuous integration with Maven 3, Mercurial/Git, and Hudson/Jenkins
- Implementing configurable timers and asynchronous batch processing
- Eventual consistency and high-performance deferred writes with Java EE 6
- Real-time client and server monitoring with JMX and REST
- Functional testing with FitNesse
- Performing stress and load tests
- Simplest possible, but maintainable, Java EE 6 design and architecture

Real World Java EE

Night HacksDissecting the Business Tier will benefit experienced developers and architects interested in code, not PowerPoint slides :-).
