

Information Security Awareness Basics

Information Security Awareness Basics provides a standardized basic security awareness program for deployment across an enterprise in booklet form. For small enterprises: the awareness booklet can be deployed by purchasing copies for all workers and briefing them on differences between the booklet and internal rules. For larger enterprises: the awareness booklet can be customized to your needs and deployed across the enterprise, complete with your logos, custom questions and exams for enterprise feedback, and adding or removing elements of the program as desired. For the largest enterprises: The awareness booklet can be licensed for internal-only on-line use and configured as a set of training modules within existing automated workflow systems.
