

Topics in Cryptology -- CT-RSA 2005: The Cryptographers Track at the RSA Conference 2005, San Francisco, CA, USA, February 14-18, 2005, Proceedings ... Computer Science / Security and Cryptology)

The RSA Conference is attended by over 10,000 security professionals each year. The Cryptographers Track (CT-RSA), one of several parallel tracks at the conference, provides an excellent opportunity for cryptographers to

showcase their research to a wide audience. CT-RSA 2005 was the 7th year of the Cryptographers Track. The selection process for the CT-RSA program is the same as for other cryptography research conferences. This year, the

program committee selected 23 papers from 74 submissions (two of which were later withdrawn) that covered all aspects of cryptography. The program also included two invited talks by Cynthia Dwork and Moti Yung. These proceedings

contain the revised versions of the selected papers. The revisions were not checked, and so the authors (and not the committee) bear full responsibility for the contents of their papers. I am very grateful to the program

committee for their very conscientious efforts to review each paper fairly and thoroughly. The initial review stage was followed by a tremendous amount of discussion which contributed to our high confidence in our

judgements. Thanks also to the many external reviewers whose names are listed in the following pages. My apologies to those whose names were inadvertently omitted from this list. Thanks to Eddie Ng for maintaining the submission server and the Web

review system. The submission software was written by Chanathip Namprempre, and the Web review software by Wim Moreau and Joris Claessens. Thanks to Alfred Hofmann and his colleagues at Springer for the timely production of these

proceedings. Finally, it is my pleasure to acknowledge Ari Juels and Mike Szydlo of RSA Laboratories for their assistance and cooperation during the past

seven months.
